Research & testing

research study new technology's and find ways to improve their equipment. they perform testing to see how good systems perform and they use there results to improve better solutions.

Problem solving

They find problems and develop ways to fix them. Engineers trubleshoot equetment. test diffrent solotions and make changes.

Teamwork & Communication

Research engineers work with other engineers to complete projects. so, there must be clear communication about the project requirements so they can meet the deadlines on time.

Safety & Quality Control

Engineers must make sure that there equipment meets safety rules and quality standers. there are multiple tests and they have other engineers look at there work before a project is finished. the goal is to make sure that the final product works corecly and meets the clients needs.
